

Manual:

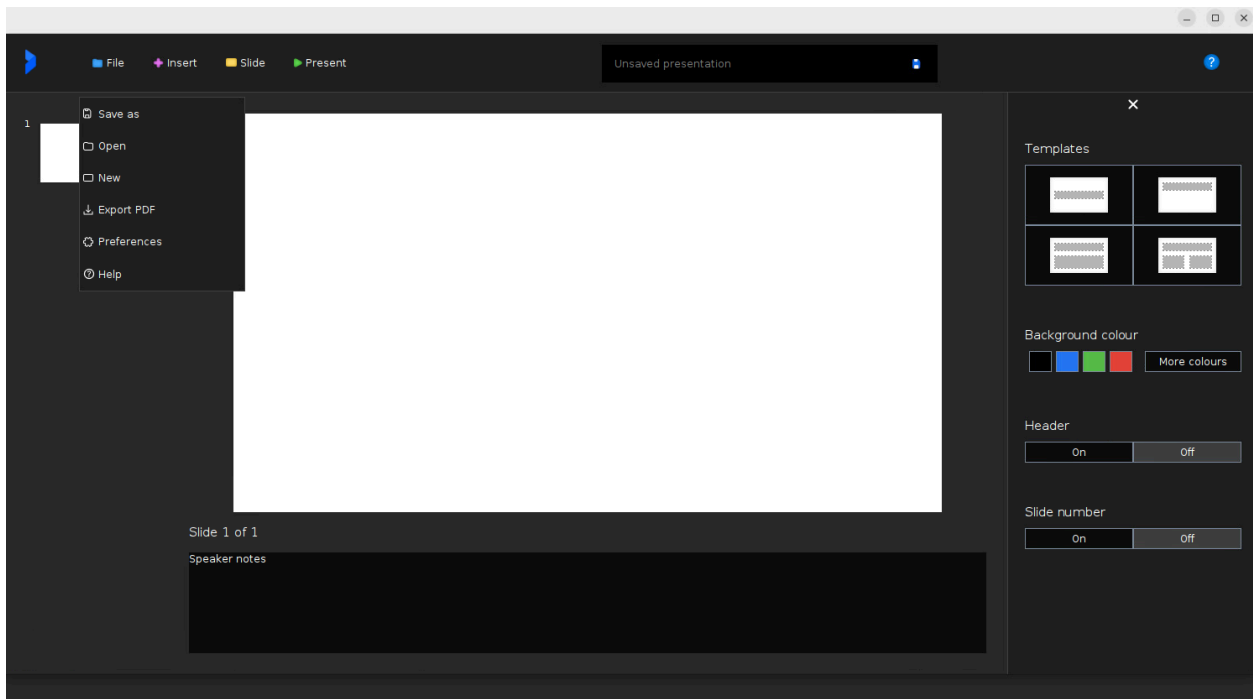

Start-up screen:

Highlighted in the red are the main functions of the program.

File:

Under the File drop-down menu:

Save As: Prompts you to select the directory you want to save the presentation in.

Open: Opens an existing presentation.

New: Starts a new blank presentation.

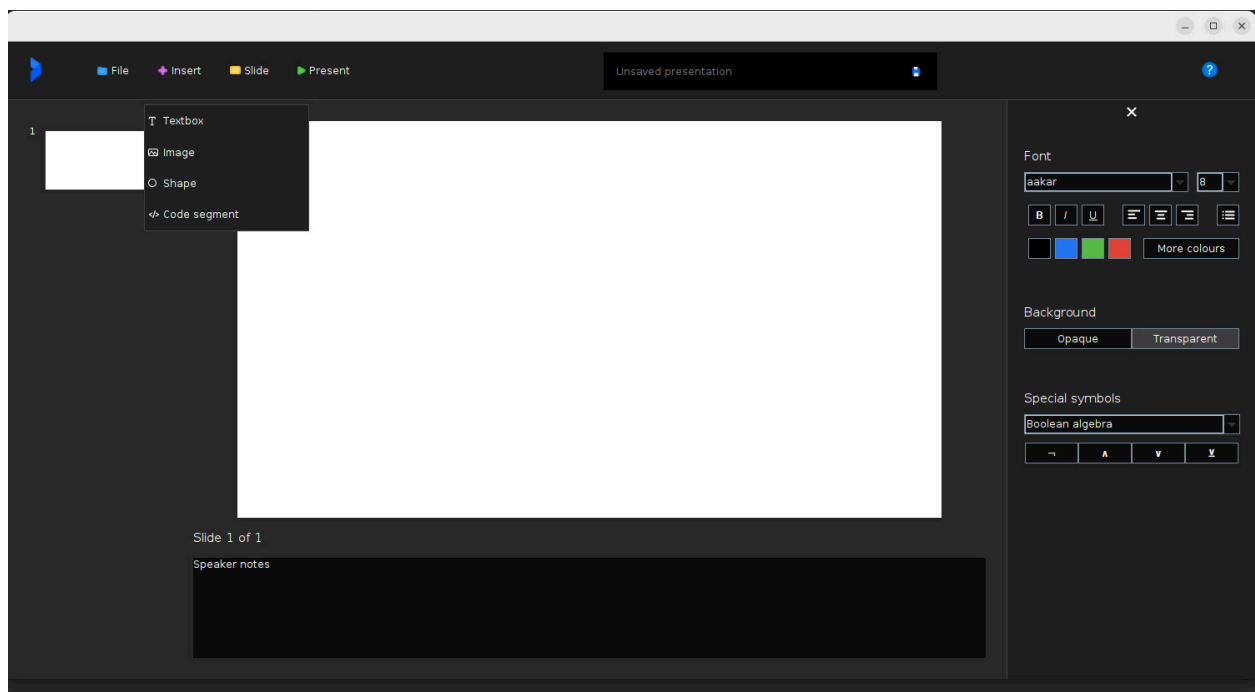

Export PDF: Prompts you to select the directory where you want to save the PDF image of all the slides

(Takes a screenshot of the canvas, so if anything is overhanging then it will be cut off from the screenshot)

Preferences: You can switch between light or dark themes and toggle gridlines on and off.

Help: Lists the keyboard shortcuts available.

Insert:

Under the Insert drop-down menu:

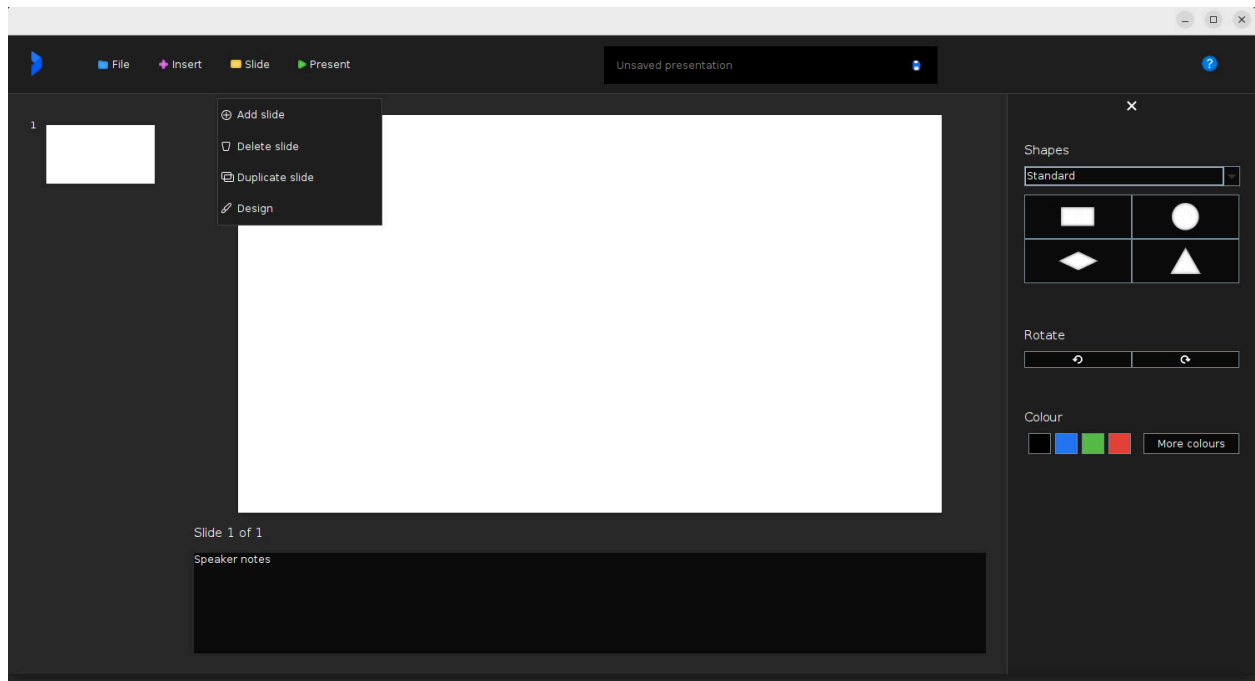

Textbox: Adds a textbox to the canvas.

Image: Prompts you to select the image you want from your files to insert.

Shape: Allows you to add different shapes to the canvas.

Code segment: Adds a textbox to the canvas where any code written will be highlighted.

Slide:

Under the Slide drop-down menu:

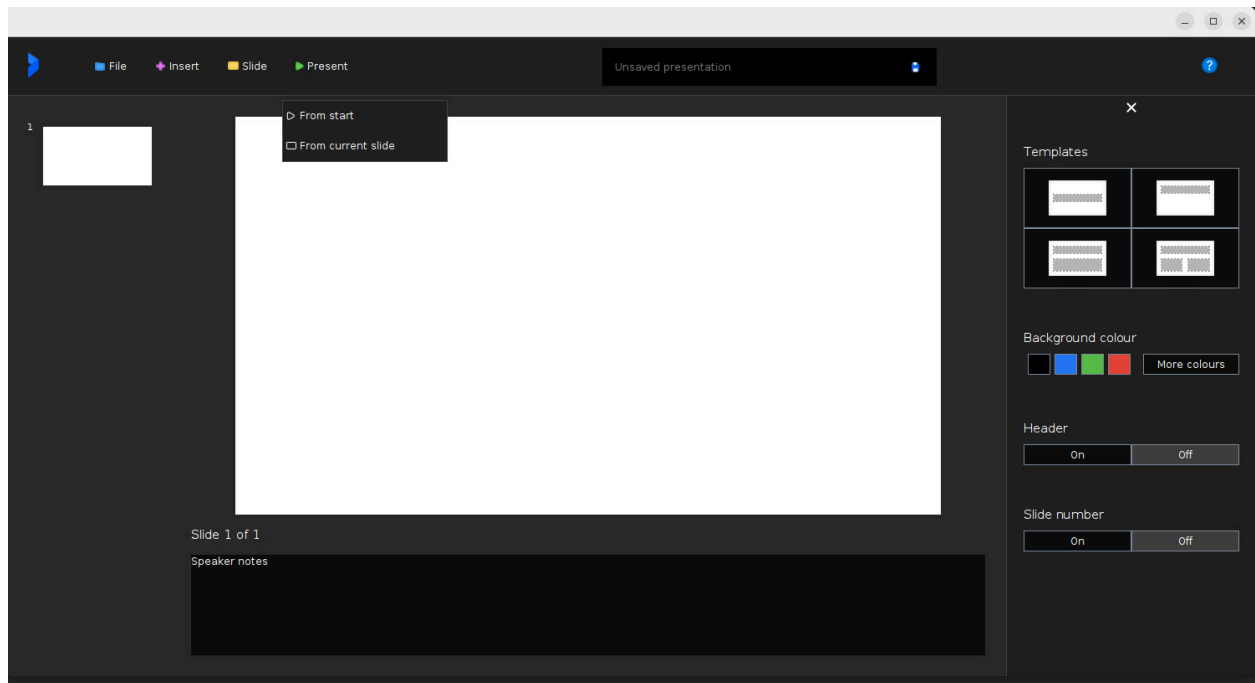

Add slide: Add a new slide to the presentation.

Delete slide: Deletes the current slide you are on.

Duplicate slide: Duplicates the current slide.

Design: Allows you to use a template, change the background colour, slide number on/off and header on/off.

Present:

Under the Present drop-down menu:

From start: Allows you to present the presentation from the first slide.

From current slide: Allows you to present the presentation from the current slide.

Reordering of slides:

Using the mouse, drag and hold the slide you want to move. Whilst still holding the mouse down, hover over the thumbnail of the slide canvas you want to change positions with and click on that slide that want to move it to. It will be updated and the slide will be moved accordingly.

Deleting of elements:

To delete elements such as:

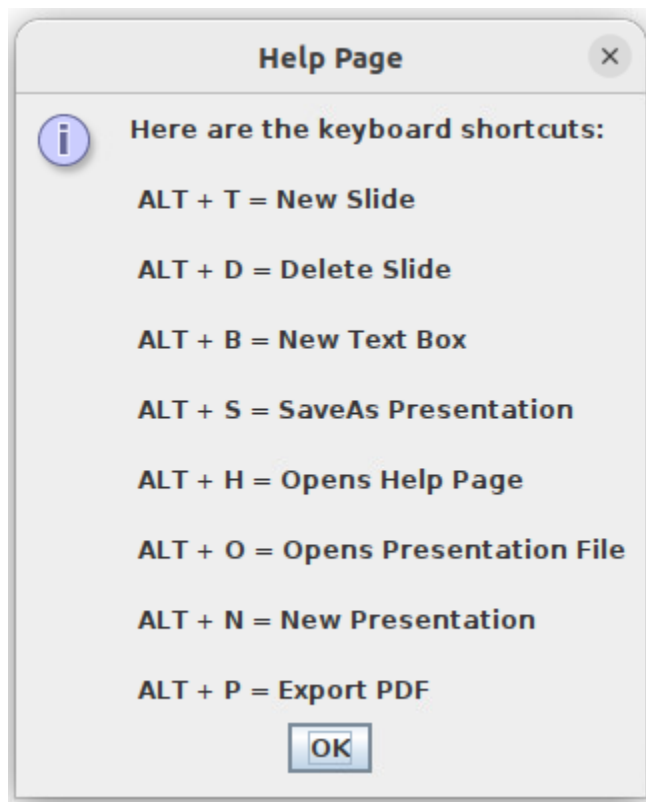

- Textboxes
- Images
- Shapes

Right-clicking on the element will produce a drop-down menu where you can either copy the element or you can remove the element.

List of keyboard shortcuts:

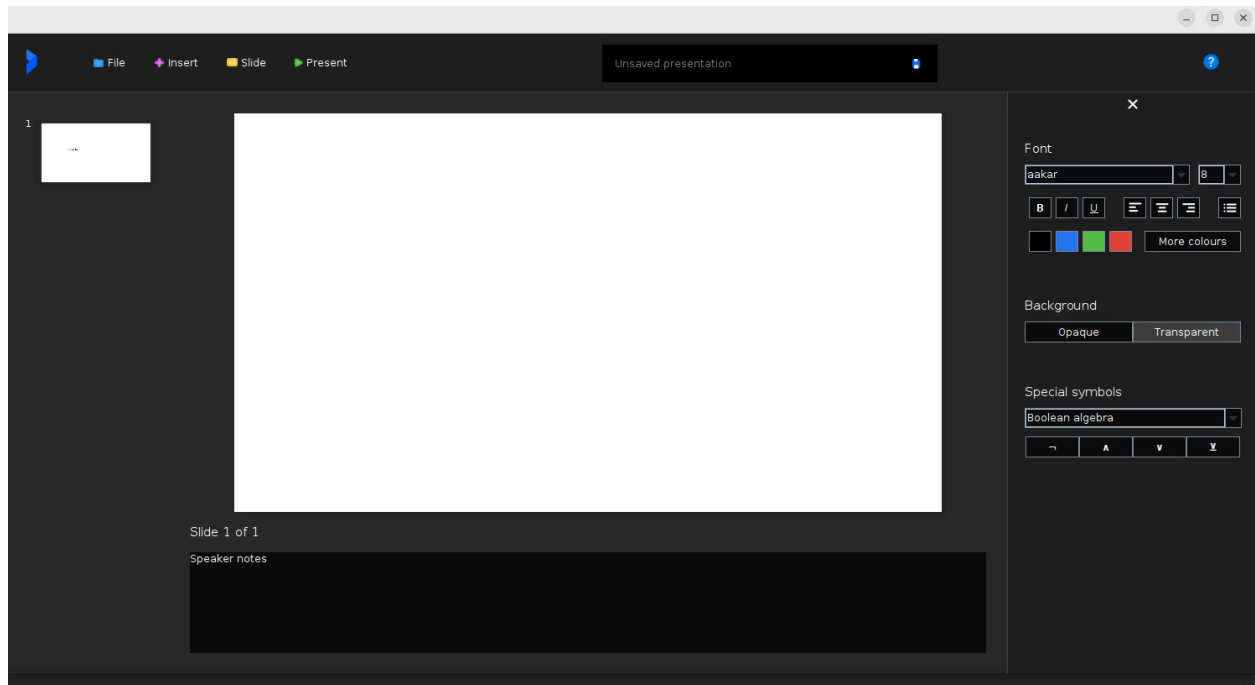

By holding down alt + h on the keyboard, you can bring up the help page.

Below is the list of all the keyboard shortcuts:
